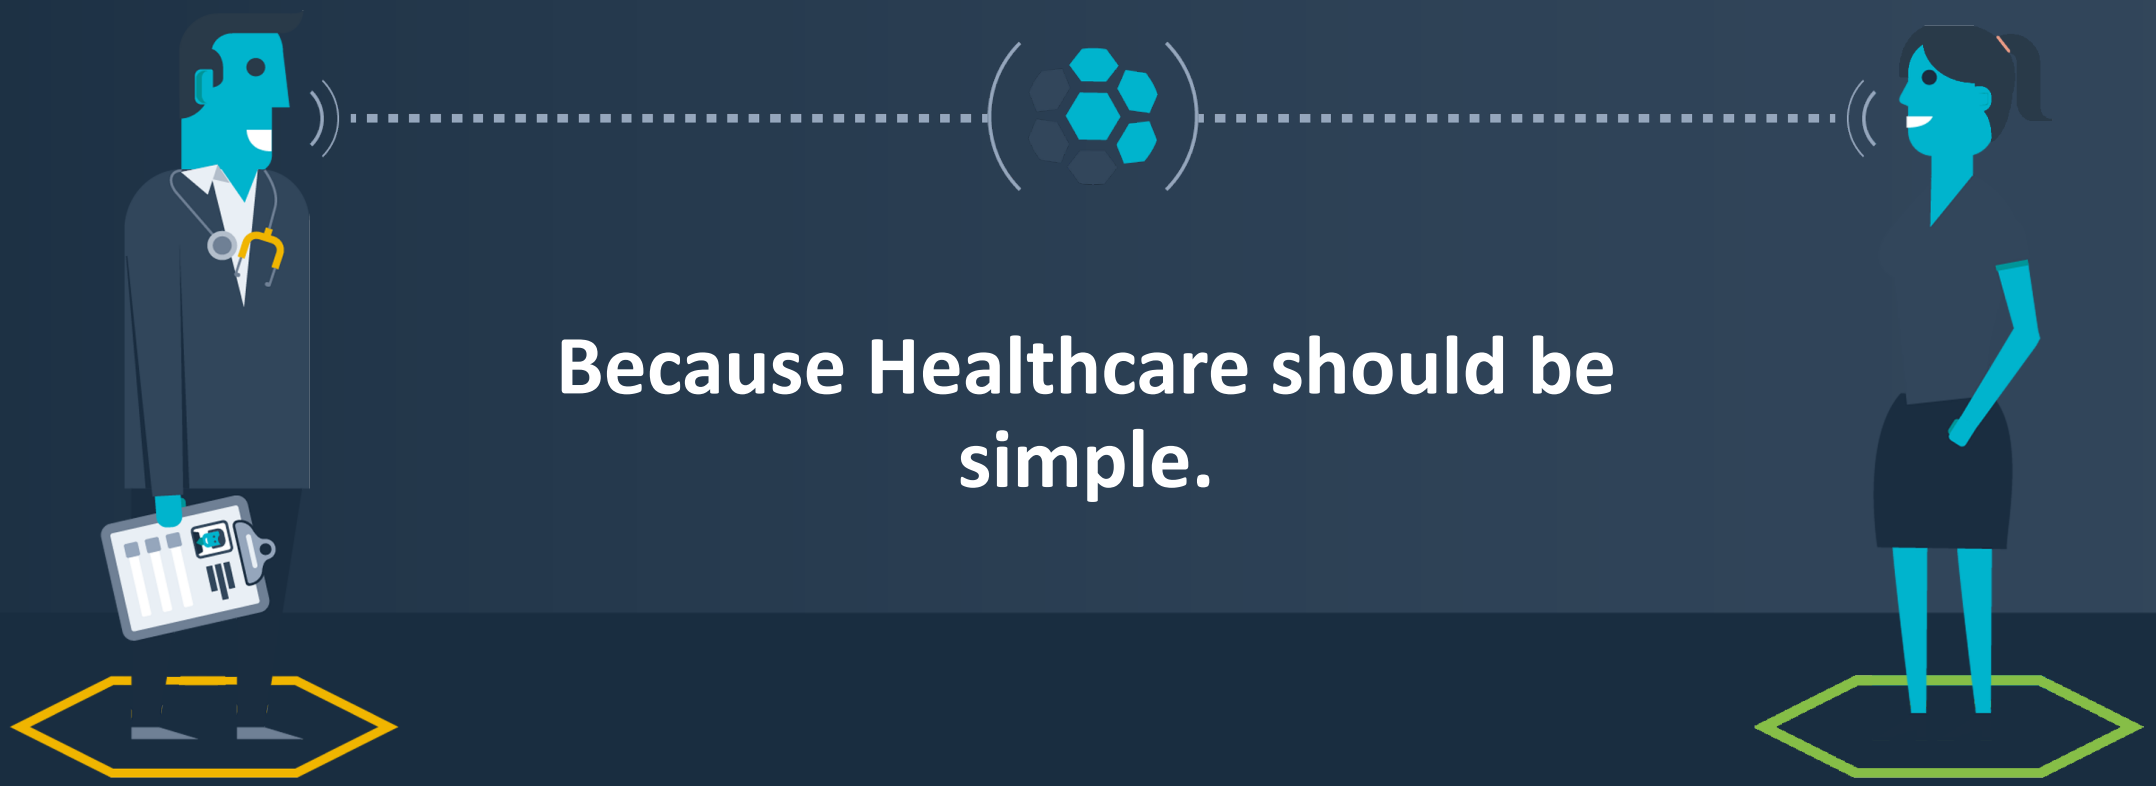
abartysHealth



Because Healthcare should be simple.

abartysHealth wants to make the healthcare process simple for everyone involved. We centralize and improve healthcare processes by making these solutions that will streamline data transfer, communication and services for patients, doctors and insurance companies.

patientLynk

patientLynk is a cloud-based patient portal so patients and providers have access to it from anywhere. It breaks down the communication barriers between providers and their patients and makes talking with each other simple.

The Status Quo

abartysHealth sees that the current healthcare system has disjointed communication between all involved parties, which leaves information scattered across providers and insurance companies. And the problem isn't just that these companies aren’t talking with each other, sometimes they are speaking different languages.

How Patients Are Affected

In the current public health crisis, patients want to know information quickly. Patients getting fast access to test results — and understanding what they mean — can tell them about their own health and help healthcare providers limit the spread of coronavirus when each day and each hour are important. Our system helps that overall.

How patientLynk Helps

Our automated, cloud-based system connects patients and providers with that necessary information in real time. And by following HL7 guidance, data transfers and visualizations are not just presented in the same “language,” they make it easy for patients and providers to get important information at a glance.

patientLynk keeps that essential information in one place. Better yet, it is laid out for patients to have a clear understanding of results. And labs can provide those results as soon as they’re available.

Keeping Information in One Place

This cloud-based service can bring patients and healthcare providers together and keep all a patient's essential records in one spot without having the high costs of building a custom portal.

Available Wherever, Whenever

This cloud-based service can bring patients and healthcare providers together and keep all of a patient's essential records in one spot without having the high costs of building a custom portal.

Simplify Information

For patients, test results can sometimes be confusing or hard to understand. Our ultimate goal is to make it easy. Viewing results should be simple, so automation is used not only to quickly share lab results but also to explain what they mean. Data is displayed in pictures and graphs to give the historic information as well as immediate results at a glance showing patients exactly what they need to know.

Patient Engagement

We also give patients more control and keep them engaged when they're outside the lab. Our site has an easy-to-use interface that lets patients access information whenever and wherever they want it.

Keep Costs Down

Because it is web-based and already developed to make its robust feature set ready from the start, patientLynk keeps costs down for everyone involved. For labs, there is no need to develop a custom patient portal.

And the ability to give patients direct, online access to test results means less time spent playing phone tag to share information.

Win, Win

patientLynk is developed with patients in mind. Information is delivered faster, more directly and in an easy-to-understand format. Automated tools, such as chronic condition tracking and a Health Risk Assessment, keep insurance premiums down and information is available anytime, anywhere.

patientLynk makes the patient-provider communication process simple!

"placeholder"

"Love that all of my healthcare is in one place. I went to the doctor and simply pulled up my record on my phone."

– By Patient

"This system has made it easier to connect with my patients and organize my communication with insurance providers"

– By Doctor
