

Maintaining Leadership in Emerging Transportation Technologies

The problem: We need to encourage innovation and maintain U.S. leadership in emerging transportation technologies like unmanned aircraft systems (UAS), urban air mobility (UAM), and automated vehicles (AVs).

Why it matters: These technologies have the potential to transform how people travel, how packages are delivered, and how businesses operate.

The solution: The U.S. Chamber of Commerce Technology Engagement Center (C_TEC) offers some [recommendations](#):

- **Emerging Aviation Technologies:** Policymakers should focus on safely integrating emerging aviation technologies into the national airspace and strengthening U.S. competitiveness in emerging aviation.
- **Automated Vehicles:** Focus should be on removing barriers to innovation through regulatory and non-regulatory approaches; ensuring regulatory clarity; educating the public on this technology; and strengthening research, development and testing.
