

## The Need for a National Data Strategy

The U.S. Chamber Technology Engagement Center [recommends](#) a national data strategy to promote public health and safety, encourage consumer protection, and instill business certainty.

**Why it matters:** Data analytics has long been a driver of the United States' 21st-century economic leadership in the areas of financial inclusion, public health, and safety.

**Details:** In order for Americans to continue to reap these benefits we recommend:

- **National data privacy legislation:** Congress must pass national data privacy legislation that protects all Americans equally and eliminates a patchwork of state laws. Privacy legislation should provide consumers with easy-to-understand rights and businesses with clear obligations.
- **Artificial Intelligence:** Policymakers must embrace commonsense regulatory approaches, invest in AI research and development and open government data, and lead in the creation of AI standards.
- **Information technology modernization:** Congress and the administration must take a proactive approach to providing funding to upgrade federal IT systems.
