

Digital Empowers Summit Explores How Tech Can Improve Society

Last week, the U.S. Chamber Foundation and Tata Consultancy Services' (TCS) third annual [Digital Empowers Summit](#) dove into timely topics in social innovation, including virtual sessions on building an inclusive Black tech ecosystem and leveraging government open data for the greater good.

Key takeaways:

- **Companies can leverage technology and innovation to improve their social footprint:** UPS's partnership with CVS to deliver prescription medicine via drones is a good example.
- **The pandemic and the subsequent crises have exposed gaps that exist in society:** Now we know not having access to technology is a barrier that is widening the opportunity gap for vulnerable populations.

Congrats to...remote internship platform Symba, the winner of the inaugural Pitch for Purpose competition that took place during the summit. Co-founder and CEO Ahva Sadeghi impressed the judges with Symba's mission to remove barriers of entry to the workforce by connecting companies with remote interns anywhere in the U.S.
