

Rally For Recovery: Tenet Healthcare

Tenet Healthcare committed to Rally For Recovery, joining other organizations across the country to protect workers, patients, and those in the community as we all work to defeat COVID-19.

Since the pandemic's onset, Tenet has relied on a collective resilience and adaptability across the company's network of 65 hospitals and 450 other healthcare facilities. First and foremost, the Company kept its hospital doors open at all times, building every protocol around the delivery of safe care and committing resources where they were needed most. The Company's ambulatory centers, operated by United Surgical Partners International, have also provided a safe and critical access point for surgical and other care performed primarily on an outpatient basis.

Tenet has met critical care needs, instituted COVID-safe infrastructure, advanced medical technology improvements and implemented strong infection control policies to keep staff and extended communities safe. Richer data for operators, open and constant lines of communication and a cohesive response have been critical.

Tenet's Incident Command Center has remained the hub of these efforts, allowing for close coordination among all hospitals and facilities. Custom, real-time dashboards have allowed staff to monitor critical metrics, such as PPE supply, medications and ICU availability. This response effort has evolved through various community surges and pivoted to address changing federal, state and local regulations throughout.

Since vaccinations became available, Tenet has set up numerous clinics in its own facilities, while forming partnerships with local churches, schools and area governments to provide additional vaccine sites. Tenet is focused on accessibility, education and bridging cultural disparity gaps to help get shots in arms. Tenet encourages vaccinations for all eligible people to end the pandemic and return to health.
