

## Rally For Recovery: IBM

IBM is proud to join employers across the country who have committed to Rally For Recovery. Since the earliest days of the pandemic, the company has focused on responsibly applying powerful technologies to enhance responses and accelerate recovery.

Among its earliest efforts was the launch in conjunction with the White House of the [COVID-19 High Performance Computing Consortium](#). This unprecedented collaboration brought together the most supercomputing capacity ever assembled to accelerate scientific research into treatments, cures and other insights to combat COVID-19. This global effort has supported research on everything from the behavior of droplet particles indoors to support school reopening to possible COVID applications of existing therapeutics.

To support vaccination, IBM has launched micro targeting consulting services to help states ensure that the needs of their most critical populations are included in vaccination strategies and logistics planning. Together with Moderna, the company is exploring how advanced technologies like AI, blockchain, and hybrid cloud could support smarter COVID-19 vaccine management, improve supply chain visibility and boost confidence in vaccination programs.

Finally, the company has launched its digital health pass solution to provide a voluntary, convenient, and secure option for people to verify their vaccination status or COVID-19 test result. The technology is the basis for a [first-in-the-nation deployment](#) in New York State.
